*Data Analytics & Policy Research | Python, SQL, Power BI | Machine Learning & Statistical Analysis*

## OBJECTIVE

B.E. Computer Engineering graduate with hands-on project experience in data mining, statistical analysis, and dashboard-based reporting using Python, SQL, and Power BI. Experienced in building classification models, automating data-to-insight workflows, and translating analytical findings into clear, decision-ready reports. Seeking to apply these skills to data-driven analytics and policy research.

## TECHNICAL SKILLS

|                                        |                                                                                                       |
|----------------------------------------|-------------------------------------------------------------------------------------------------------|
| <b>Programming &amp; Scripting:</b>    | Python, SQL, PL/SQL, Shell Scripting (Bash), C++, Java, JavaScript                                    |
| <b>Statistical &amp; ML Methods:</b>   | Classification & regression modeling, hypothesis testing, trend analysis, Scikit-learn                |
| <b>Data Analytics &amp; ETL:</b>       | Pandas, NumPy, data cleaning & validation, large-dataset handling, ETL workflows                      |
| <b>Dashboards &amp; Visualization:</b> | Power BI (DAX, interactive dashboards), Tableau, Matplotlib, Seaborn, Excel (PivotTables, automation) |
| <b>Databases:</b>                      | MySQL, MongoDB                                                                                        |
| <b>Process Automation:</b>             | Automated reporting pipelines, scheduled data-refresh workflows                                       |
| <b>Web &amp; API:</b>                  | Django, FastAPI, REST APIs                                                                            |
| <b>Cloud &amp; DevOps:</b>             | AWS (S3, IAM), Git, CI/CD, Docker (basic)                                                             |

## KEY PROJECTS

### Customer Churn Prediction & Trend Classification System

*Python, Scikit-learn, SQL, Excel | Mar 2023 – May 2023*

- Built a classification model to identify at-risk customers from behavioral and transactional data, evaluated against ground-truth churn labels using standard classification metrics.
- Automated data extraction and refresh from SQL into Excel-based reporting, reducing manual reporting effort and surfacing churn trend patterns for stakeholder review.
- Translated model output into a retention-strategy brief for non-technical stakeholders — the same skill needed to turn analytical findings into policy-support material.

### Investment Portfolio Optimizer Dashboard

*Python, Power BI, Monte Carlo Simulation | Nov 2024 – Jan 2025*

- Designed an interactive Power BI dashboard visualizing portfolio risk metrics, asset correlations, and historical trends to support data-driven decision-making.
- Applied mean-variance optimization and Monte Carlo simulation to model scenario-based forecasts of returns and downside risk.
- Built drill-through style interactive views enabling users to move from summary metrics to underlying data — directly transferable to monitoring and analytical-reporting dashboards.

## TRAINING & SIMULATION EXPERIENCE

### Software Development Life Cycle (SDLC) Simulation — Forage Virtual Program

*Jan 2025*

- Analyzed simulated client requirements and produced structured documentation (user stories, process designs) following Agile/Scrum practices.
- Practiced translating business requirements into technical specifications — a precursor skill to converting analytical findings into policy-ready briefs.

## EDUCATION

**B.E., Computer Engineering** — ISB&M School of Technology, Pune | 2021 – 2025

CGPA: 7.78 | Coursework: Data Structures & Algorithms, Design and Analysis of Algorithms, Operating Systems, DBMS

## CERTIFICATIONS

- Web Development Training — Internshala (Mar 2023 – May 2023)
- Data Structures & Algorithms — Udemy (Dec 2024 – Jan 2025)
- Node.js MasterClass — Udemy (Nov 2024 – Jan 2025)
